Step 2 of 6 - Project Description

33%

Project Description

The specific research theme being addressed. Check only one below.

Research Topics/Themes *

- Physical distribution, dispersion, and dilution of petroleum (oil and gas), its constituents, and associated contaminants (e.g., dispersants) under the action of physical oceanographic processes, air-sea interactions, and tropical storms.
- Chemical evolution and biological degradation of the petroleum/dispersant systems and subsequent interaction with coastal, open-ocean, and deep-water ecosystems.
- Environmental effects of the petroleum/dispersant system on the sea floor, water column, coastal waters, beach sediments wetlands, marshes, and organisms; and the science of ecosystem recovery.
- Technology developments for improved response, mitigation, detection, characterization, and remediation associated with oil spills and accompanying releases of gas.
- Impact of oil spills on public health including behavioral, socioeconomic, environmental risk assessment, community capacity and other population health considerations and issues.
